RGC2P, RGC3P

3-phase proportional switching controllers

Description

This series gives the possibility to control output power of 3-phase loads with an analog control input. The **RGC2P** is a 2-pole switching product whilst the **RGC3P** switches all 3 poles.

Input types cover a wide range of current and voltage ranges. Local setting by an external potentiometer is also possible. Switching modes cover phase angle control and distributed full cycle control.

Detection of mains loss, load loss, SSR short circuit and overtemperature is integrated in some models. Alarm condition is signalled through an EMR output and is visually indicated by the alarm LED. Additional LEDs indicate input and load status.

Specifications are at a surrounding temperature of 25°C unless otherwise specified.

Benefits

- **Elimination of Analog to Digital convertors.** The RGC2/3P can be directly controlled with an analog signal. The power output from the RGC2/3P is directly proportional to the analog control input. Output switching modes include phase angle, distributed full cycle and burst switching.
- **Panel space savings.** Concentrated power; the RGC 3-phase switching range can handle up to 65 AAC per pole (or 75 AAC for 2-pole switching) in a 70 mm wide footprint.
- **Long lifetime.** Wire bonding technology reduces thermal and mechanical stresses of the output chips resulting in a larger number of possible operational cycles compared to other assembly technologies.
- **Low machine downtime.** Integrated overvoltage protection prevents the solid state relay from breaking down due to uncontrolled transients that may occur on the lines.
- **Ease of use.** The RGC2P and RGC3P are ready to use solutions provided with integrated heatsink thus eliminating the need for the user to calculate the size of heatsink needed for adequate thermal dissipation.
- **Fast wiring**. Power connections for models rated ≥30 A are equipped with terminals that can handle cables up to 25 mm^2 / AWG3 cables.
- **Integrated monitoring for timely detection of malfunctions.** The 3-phase RGC controllers can detect mains loss, load loss on any of the phases, over temperature and malfunction of the RGC2/3P controller.
- **Accommodates UL508A requirements for Industrial Control Panels.** The RGC 3-phase range is certified as a listed product. All models carry a 100 kArms Short Circuit Current Rating.

Applications

Plastic injection machines, thermoformers, dryers, electrical ovens, shrink tunnels, air handling units, climatic chambers, industrial printers, ovens and furnaces, battery manufacturing machines

Main features

- 3-phase (2-pole or 3-pole) proportional switching controllers with Phase angle switching mode, Full cycle firing or Burst firing switching mode.
- Analog current (0-20/4-20/12-20 mA) or voltage (0-5/1-5/0-10 V or external potentiometer) control signal
- Ratings up to 660 VAC 75 AAC (RGC2P), 65 AAC (RGC3P) @ T_A 40°C
- Integrated monitoring for load loss, over-temperature of the RGC2/3P, mains loss or malfunction of the RGC2/3P controller

Carlo Gavazzi compatible components

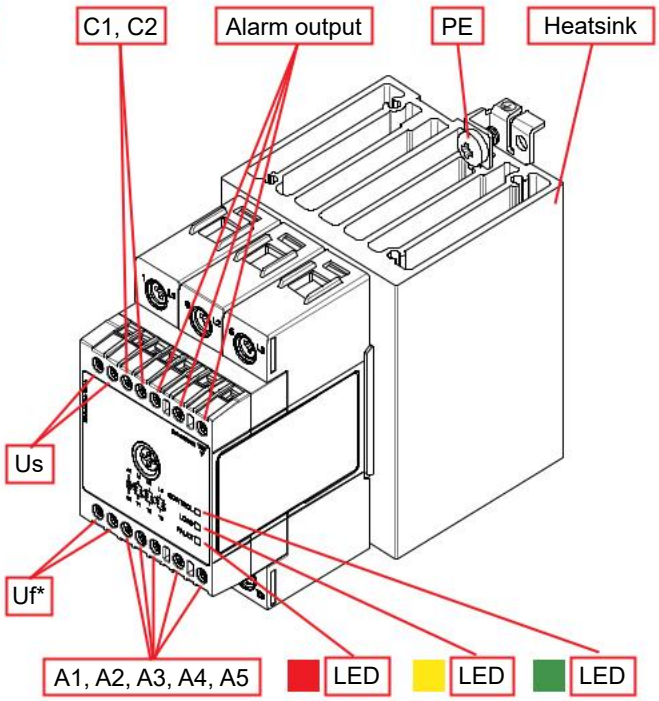

Description	Component code	Notes
Fans	RG3FAN60	Fan accessory for RGC2..75 and RGC3..65

Structure

RGC3P..AA..

RGC3P..I..
RGC3P..V..

Element	Component	Function
1/L1, 3/L2, 5/L3	Power connections	Mains connection
2/T1, 4/T2, 6/T3	Power connections	Load connection
A1, A2	Control input	4-20 mA (RGC..AA..), 4-20 mA (RGC..I..), 1-5 V (RGC..V..)
A1, A3	Control input	12-20 mA (RGC..I..), 0-5 V (RGC..V..)
A1, A4	Control input	0-20 mA (RGC..I..), 0-10 V (RGC..V..)
A5	Potentiometer input	External Potentiometer input (RGC..V..)
Us	Supply connection	Terminals for supply voltage
C1, C2	Configuration	External short link ONLY for 4-wire, 3-phase systems
Uf*	Fan connection	Terminals for fan supply voltage. Connection terminated by manufacturer
Alarm output	Electro mechanical relay	Alarm output; normally open, normally closed
Green LED	CONTROL indicator	Indicates presence of control voltage and supply voltage
Yellow LED	LOAD indicator	Indicates the load status
Red LED	ALARM indicator	Indicates presence of an alarm condition
Heatsink	Integrated heatsink	DIN rail mounting
PE	Protective Earth	Connection for Protective Earth

* only for RGC2..75, RGC3..65 versions that have an integrated fan

Features

General data

Material	PA6 or PA66 (UL94 V0), RAL7035 conforms to the glow wire requirements of IEC/EN 60335-1
Mounting	DIN rail
Touch protection	IP20
Overvoltage category	III, 6 kV (1.2/50 µs) rated impulse withstand voltage
Isolation	Input and Output to Case: 4000 Vrms Input to Output: 2500 Vrms External supply to input: 1500 Vrms (n/a for RGC..AA.., RGC...D.) Us to A1, A2, A3, A4, A5, Uf, C1, C2, 11, 12, 14 External supply & input to EMR: 1500 Vrms (n/a for RGC..AA..) Us, A1, A2, A3, A4, A5, Uf, C1, C2 to 11, 12, 14
Weight	RGC2..25 (M): approx. 600 g (660 g) RGC3..20 (M or P): approx. 600 g (670 g) RGC2..40, RGC3..30 (M or P): approx. 840 g (920 g) RGC2..75, RGC3..65: approx. 990 g

I^2t for fusing (t=10 ms), minimum	1800 A^2s	6600 A^2s	15000 A^2s
No. of starts per hour[2]	140	18	230
Power factor	> 0.7 @ rated voltage		
Critical dV/dt (@Tj init = 40°C)	1000 V/µs		

1. Refer to Current derating curves
2. Overload profile for AC-55b, Ie: AC-55b: 6x Ie - 0.2: 80 - x, where Ie = nominal current (AAC), 6x Ie = overload current (AAC), 0.2 = duration of overload current (s), 80 = ON duty cycle (%), x= number of starts. The overload profile for RGC3..65 is AC-55b: 3.6x Ie - 0.2: 80 - x

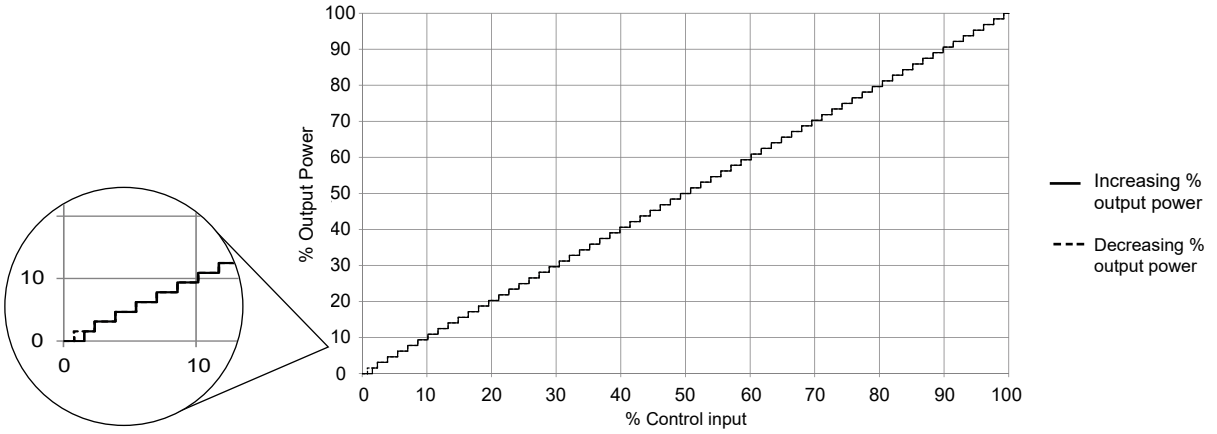

Inputs

	RGC..AA..	RGC..I..	RGC..V..
Control input	4 - 20 mADC	0 - 20 mADC 4 - 20 mADC 12 - 20 mADC	0 - 5 VDC 1 - 5 VDC 0 - 10 VDC
External potentiometer input	n/a		10 kΩ (terminal A1, A3, A5)
Maximum initialisation time	250 ms		
Response time (Input to Output) RGC..C1, C4, C16	3 half cycles		
Input impedance	n/a	< 250 Ω	100 kΩ
Linearity, Output resolution	Refer to Transfer Characteristics section		
Voltage drop	< 10 VDC @ 20 mA	n/a	
Reverse protection	Yes		
Maximum allowable input current	50 mA for max. 30 s		n/a
Input protection vs. surges	Yes		
Overvoltage protection	n/a		Up to 24 VDC

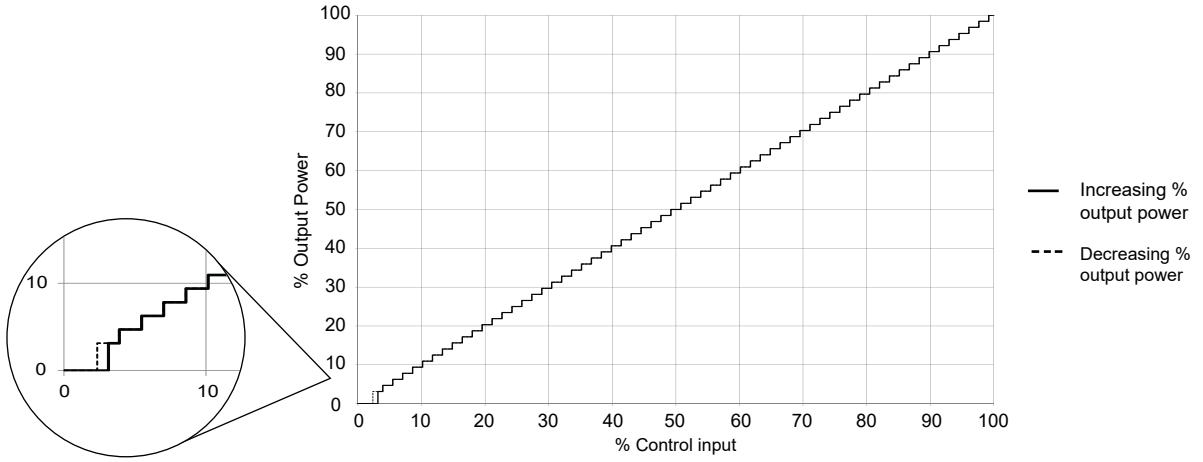

Note: Control input serial connection of multiple units is ONLY possible for RGC..AA versions and versions that require an AC external supply and hence the RGC..I..AM, RGC..I..AFM, RGC..I..AP and RGC..I..AFP models

Transfer characteristics

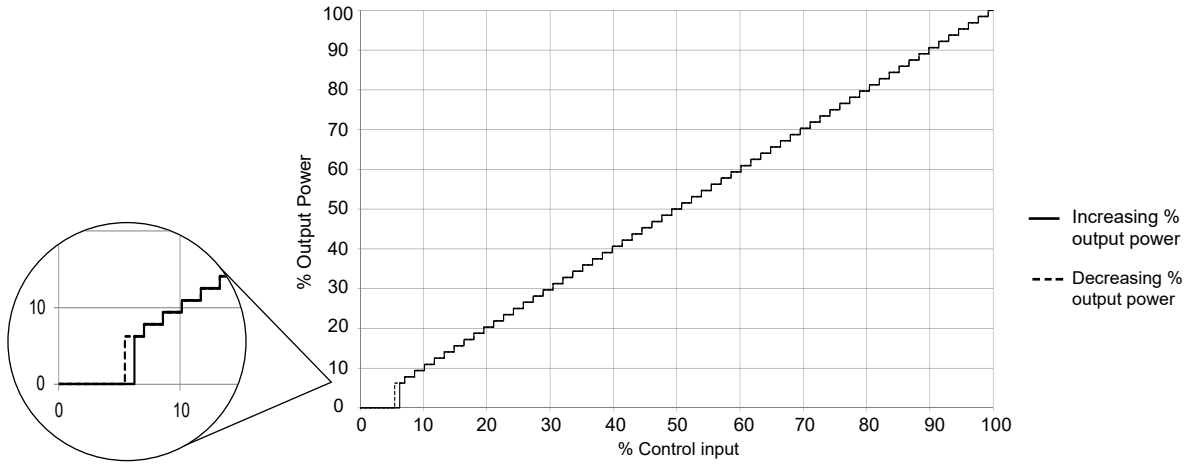

1 Full cycle switching mode: RGC...C1

4 Full cycles switching mode: RGC...C4

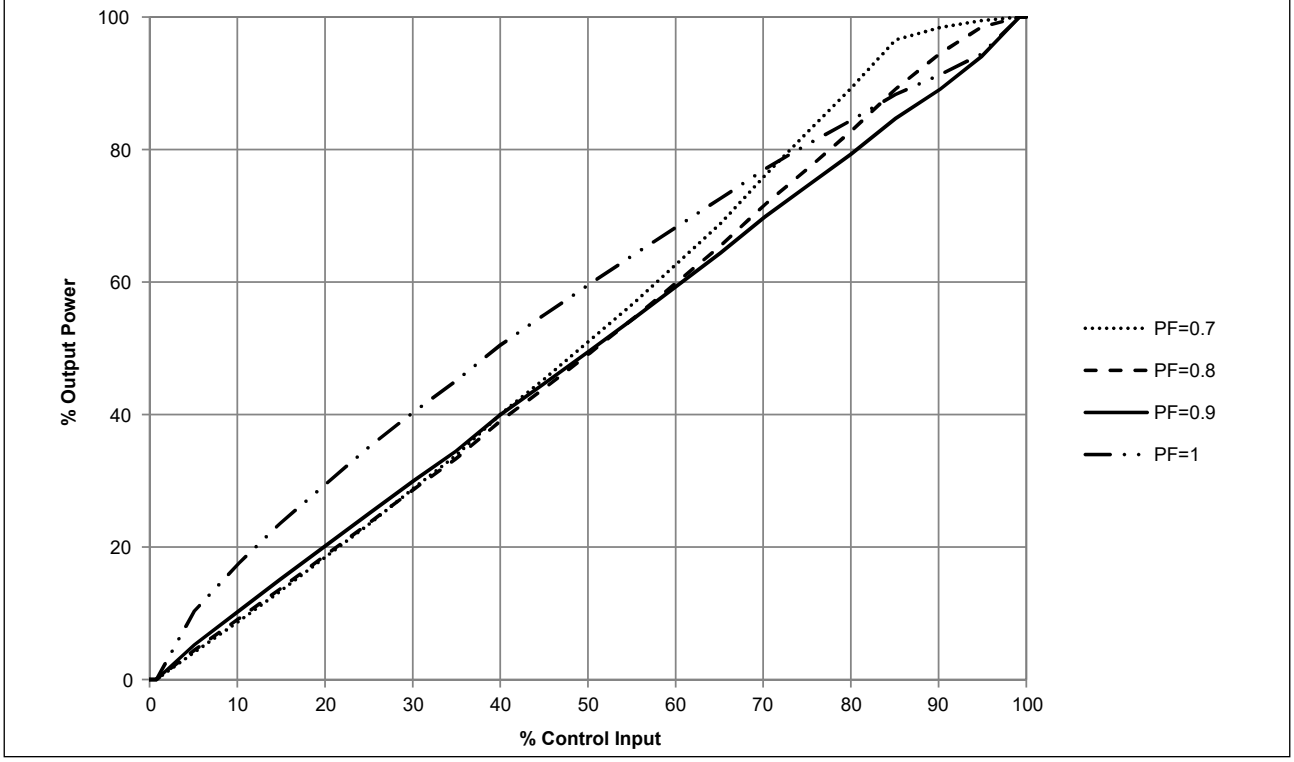

16 Full cycles switching mode: RGC...C16

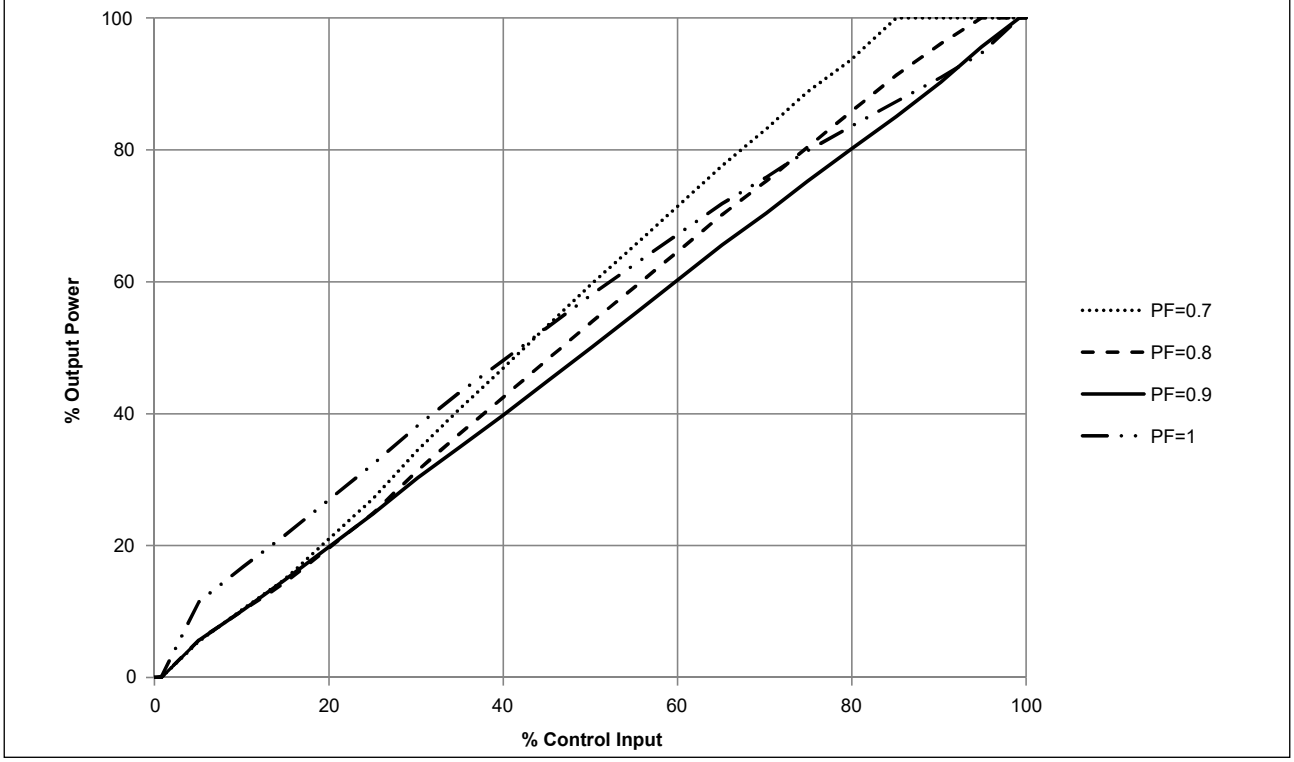

Transfer characteristics (continued)

Phase angle switching mode: RGC3P..E

3-phase, 3-wire systems

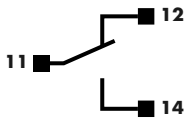

3-phase, 4-wire systems

Power supply specifications

	RGC..D..	RGC..A..
Supply voltage range, Us	24 VDC, -15% / +20% 24 VAC, -15% / +15%	90-250 VAC
Overvoltage protection	Up to 32 VDC/AC for 30 seconds	n/a
Reverse polarity protection	Yes	n/a
Max. supply current **no fan, RGC..P, RGC..M** **with fan, RGC..FP, RGC..FM**	 90 mA 175 mA	 30 mA 60 mA
Surge protection	Yes, integrated	Yes

Alarm output specifications (12, 14, 11)

	RGC..P, RGC..M
Function	Operates in case of an alarm condition on the RGC..P or the RGC..M
Output type	EMR, 1 Form C Normally closed (12-11) Normally open (14-11) 
Contact rating	2 A @ 250 VAC / 30 VDC
Isolation between open contacts	1000 VAC

Output power dissipation

		30 AAC

Filtering (continued)

Part number	Suggested filter for EN 55011 Class B compliance	Maximum heater current
RGC2P..C1..	Epcos, B84143A0025R105 / 530 VAC	25 AAC
	Epcos, B84143A0050R105 / 530 VAC	40 AAC
RGC3P..E..	Epcos, B84143A0025R105 / 530 VAC	13 AAC
RGC3P..C1..	Epcos, B84143A0025R105 / 530 VAC	20 AAC
	Epcos, B84143A0050R105 / 530 VAC	30 AAC
RGC3P..C4..	Epcos, B84143A0025R105 / 530 VAC	20 AAC
	Epcos, B84143A0050R105 / 530 VAC	30 AAC
RGC3P..C16..	Epcos, B84143A0025R105 / 530 VAC	20 AAC
	Epcos, B84143A0050R105 / 530 VAC	30 AAC

The suggested filtering is determined by tests carried out on a representative setup and load. The RGC2P.., RGC3P.. is intended to be integrated within a system where conditions may differentiate from conditions utilised for tests, such as load, cable lengths and other auxiliary components that may exist within the end system. It shall be the responsibility of the system integrator to ensure that the sytsem containing the above component complies with the applicable rules and regulations.

Epcos installation recomendations shall be taken in consideration when utilising such filters.

Note:

- Control input lines must be installed together to maintain products' susceptability to Radio Frequency interference.
- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- This product has been designed for Class A equipment. Use of this product in domestic environments may cause radio interference, in which case the user may be required to employ additional mitigation methods.
- Surge tests on RGC..A models were carried out with the signal line impedence network. In case the line impedance is less than 40Ω, it is suggested that AC supply is provided through a secondary circuit where the short circuit limit between conductors or between conductors and ground is 1500VA or less.
- A deviation of one step in the distributed full cycle models and up to 1.5% Full Scale Deviation in phase angle models is considered to be within PC1 criteria.

- Performance Criteria 1 (PC1): No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2 (PC2): During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3 (PC3): Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

Environmental specifications

Operating temperature	-40°C to +70°C (-40°F to +158°F) -40°C to +60°C (-40°F to +140°F) if Us = 24 VAC
Storage temperature	-40 to +100°C (-40 to +212°F)
Relative humidity	95% non-condensing @ 40°C
Pollution degree	2
Installation altitude	0-1000 m. Above 1000 m derate linearly by 1% of FLC per 100 m up to a maximum of 2000 m
Vibration resistance	2g / axis (2-100Hz, IEC60068-2-6, EN50155, EN61373)
Impact resistance	15/11 g/ms (EN50155, EN61373)
EU RoHS compliant	Yes
China RoHS	

The declaration in this section is prepared in compliance with People's Republic of China Electronic Industry Standard SJ/T11364-2014: Marking for the Restricted Use of Hazardous Substances in Electronic and Electrical Products.

Part Name	**Toxic or Harardous Substances and Elements**					
	Lead (Pb)	Mercury (Hg)	Cadmium (Cd)	Hexavalent Chromium (Cr(VI))	Polybrominated biphenyls (PBB)	Polybrominated diphenyl ethers (PBDE)
Power Unit Assembly	x	O	O	O	O	O

O: Indicates that said hazardous substance contained in homogeneous materials fot this part are below the limit requirement of GB/T 26572.

X: Indicates that said hazardous substance contained in one of the homogeneous materials used for this part is above the limit requirement of GB/T 26572.

这份申明根据中华人民共和国电子工业标准
SJ/T11364-2014：标注在电子电气产品中限定使用的有害物质

零件名称	有毒或有害物质与元素					
	铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr(VI))	多溴化联苯 (PBB)	多溴联苯醚 (PBDE)
功率单元	x	O	O	O	O	O

O:此零件所有材料中含有的该有害物低于GB/T 26572的限定。

X: 此零件某种材料中含有的该有害物高于GB/T 26572的限定。

Short circuit protection

Protection Co-ordination, Type 1 vs Type 2:

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state. In Type 2 co-ordination the device under test will still be functional after the short circuit. In both cases, however the short circuit has to be interrupted. The fuse between enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to conductors or terminals and the conductors shall not separate from terminals. there shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 100,000 Arms Symmetrical Amperes, 600 Volts maximum when protected by fuses. Tests at 100,000 A were performed with Class J fuses, fast acting; please refer to the table below for maximum allowed ampere rating of the fuse. Use fuses only. Tests with Class J fuses are representative of Class CC fuses.

Protection co-ordination Type 1 according to UL 508				
Part number	**Prospective short circuit current [kArms]**	**Max fuse size [A]**	**Class**	**Voltage [VAC]**
RGC2..25 RGC3..20	100	30	J or CC	Max. 600
RGC2..40 RGC3..30		40	J	
RGC2..75 RGC3..65		60[3]	J	

3. Consult a Carlo Gavazzi sales representative for use of 70 A class J fuses

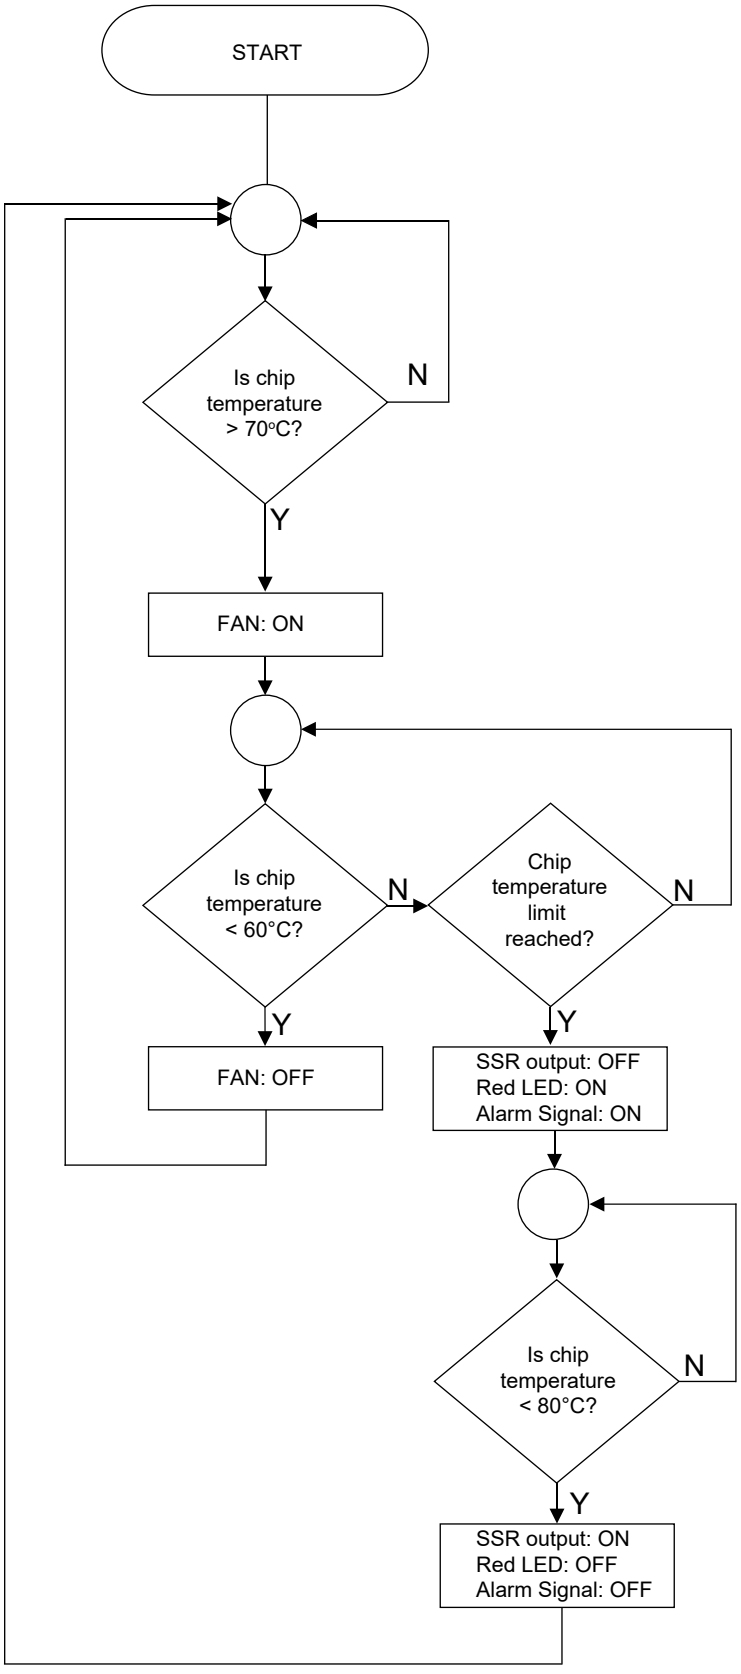

Protection co-ordination Type 2

4. Between MCB and Load (including return path which goes back to the mains)

Note: A prospective current of 6 kA and a 230 / 400 V power supply is assumed for the above suggested specifications. For cables with different cross section than those mentioned above please consult Carlo Gavazzi's Technical Support Group.

Fan operation for versions with integrated fan

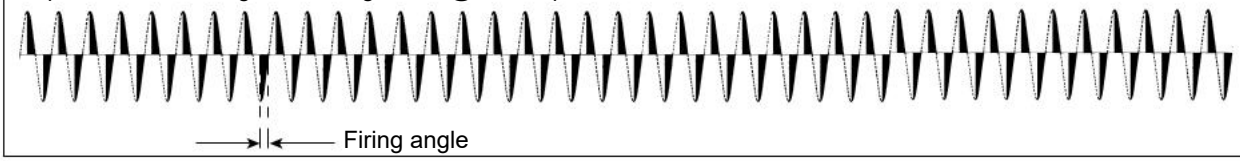

Switching modes

PHASE ANGLE switching - Mode E

The Phase angle switching mode works in accordance with the phase angle control principle. The power delivered to the load is controlled by the firing of the thyristors over each half supply cycle. The firing angle varies in relation to the input signal level which determines the output power to be delivered to the load.

Output with Phase angle switching mode @ 50% input level:

Full cycle switching:

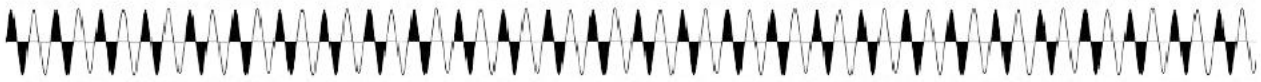

Single full cycle switching - Mode C1

In this switching mode only full cycles are switched. The number of full cycles delivered to the load over a specific time base is determined by the level of the analog input. The full cycles are DISTRIBUTED over this time base so as to ensure a fast and accurate control of the load. In mode C1, the switching resolution is 1 full cycle. Hence, @ an input level of 50% the output switching will be 1 FC ON, 1 FC OFF, @ 25% input 1 FC ON, 3 FC OFF and @ 75% input 1 FC OFF, 3 FC ON as shown in figure below.

Output with 1 FC switching mode @ 25% input level:

Output with 1 FC switching mode @ 50% input level:

Output with 1 FC switching mode @ 75% input level:

Output with 1 FC switching mode @ 100% input level:

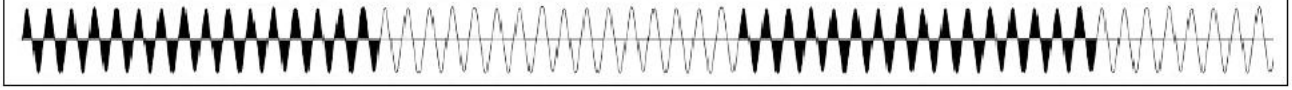

Burst full cycle switching - Mode C4 and Mode C16

The modes C4 and C16 work on the same principle of the C1 mode and hence a number of full cycles are switched in accordance to the input level distributed over a specific time base. In the case of mode C4 the lowest resolution is 4 full cycles whilst for mode C16 it is 16 full cycles. These modes are suitable for loads which have a low thermal inertia.

Output with 4 FC switching mode @ 50% input level:

Output with 16 FC switching mode @ 50% input level:

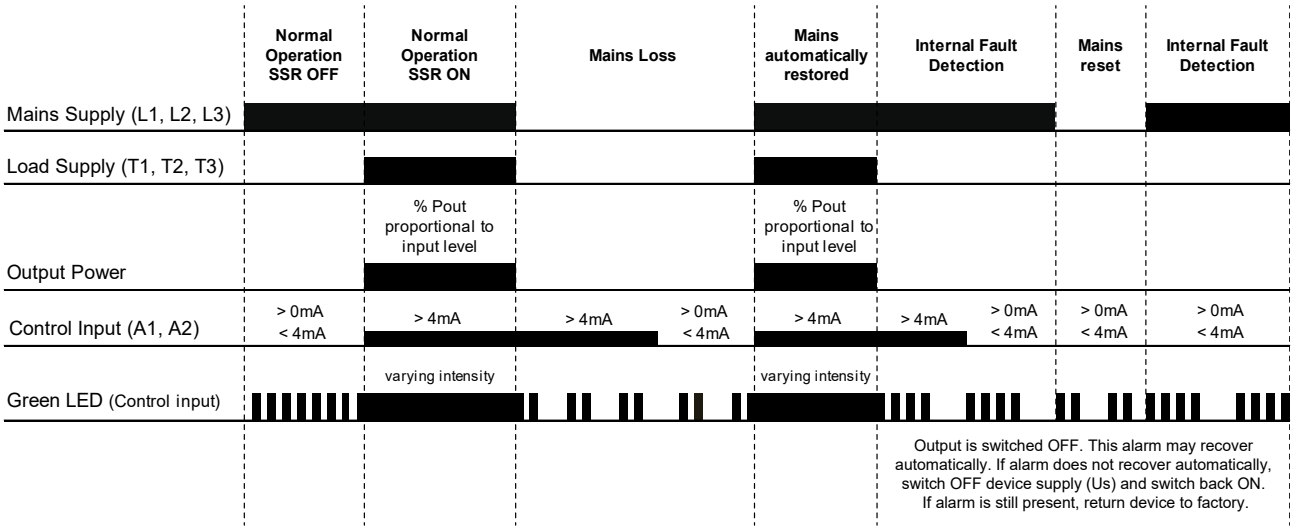

Mode of operation

RGC..AA…

The diagram below, Operation diagram 1, indicates the behaviour of models having input type 'AA' in different operating conditions. The models with this type of input are able to detect abnormal conditions such as Mains Loss and SSR Internal Fault. The presence of these abnormal conditions is indicated through the green LED which in normal operating conditions is associated with status of the control input. A flashing sequence of this LED is utilised to distinguish such abnormal conditions. Refer to LED Indications section for further details.

Operation diagram 1:

RGC..I, RGC..V..

The versions with input type 'I' or 'V' have integrated system monitoring for the detection of system and also SSR faults. An external supply of 24VDC/AC or 90-250VAC, selectable through part no. configuration, is required for the operation of these models.

In case of a fault condition, an alarm signal is issued through an EMR. A red LED is also used for visual indication with a specific flash rate for easy identification of the alarm type. Refer to section LED Indications for further details. Additionally, a yellow LED is present on the models with 'I' or 'V' input type which gives an indication of the status of the load. This LED is ON every time the SSR output, and hence the load, is in the ON state.

System monitoring is identified with suffix 'P' or 'M' at the end of the RGC part no. The following is a description of the difference between the two suffixes.

Mode of operation (continued)

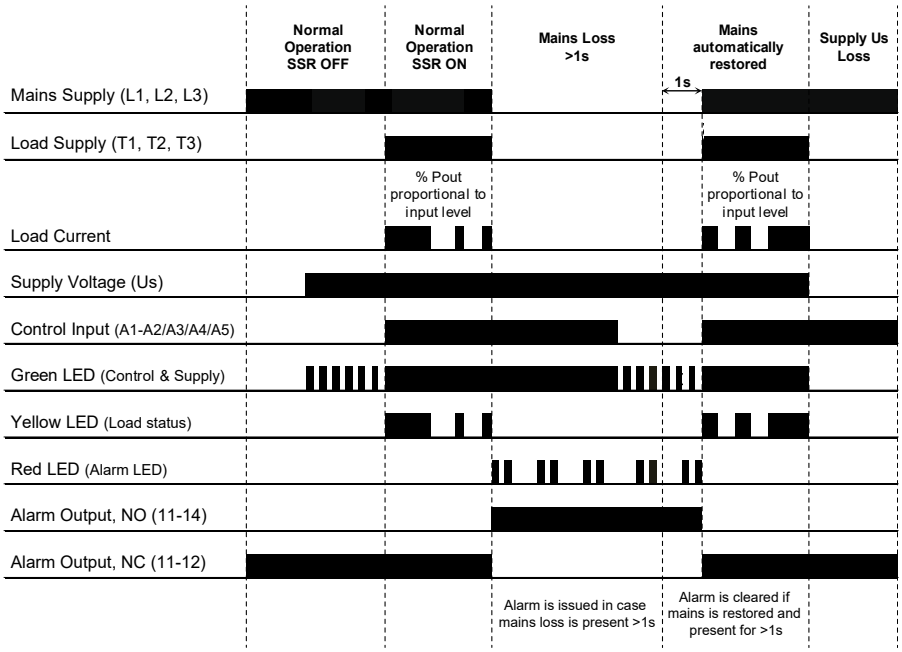

1. RGC..I..P, RGC..V..P

The versions with suffix 'P' are available only with switching mode 'E', i.e., phase angle. The detectable alarm conditions in this series are the following:

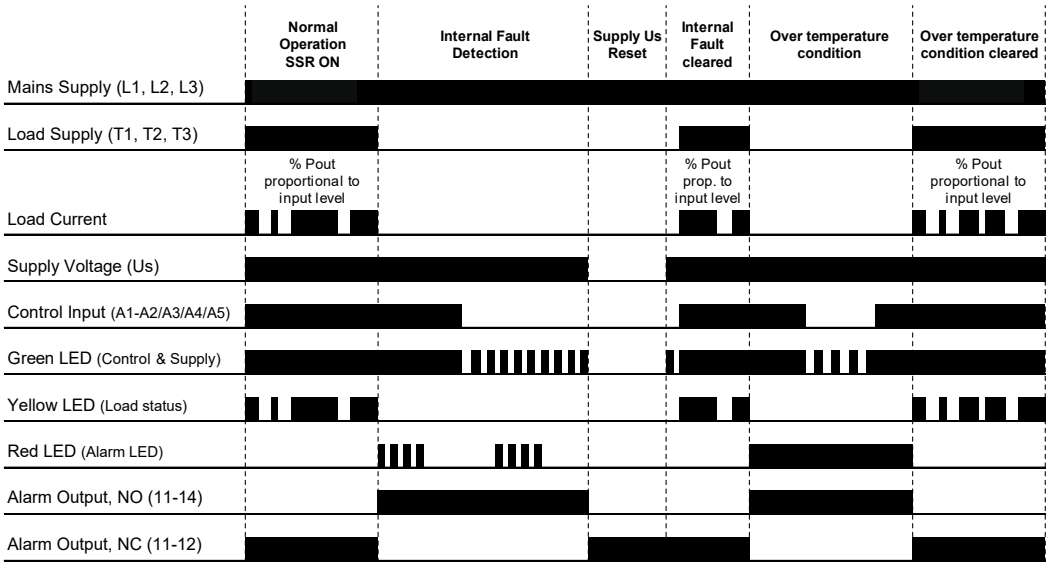

- Mains Loss (Operation diagram 2)
- SSR Over Temperature (Operation diagram 3)
- SSR Internal Fault (Operation diagram 3)

The following operation diagrams show the behaviour of the RGC..I..P and RGC..V..P under different operating and abnormal conditions.

Operation diagram 2:

Operation diagram 3:

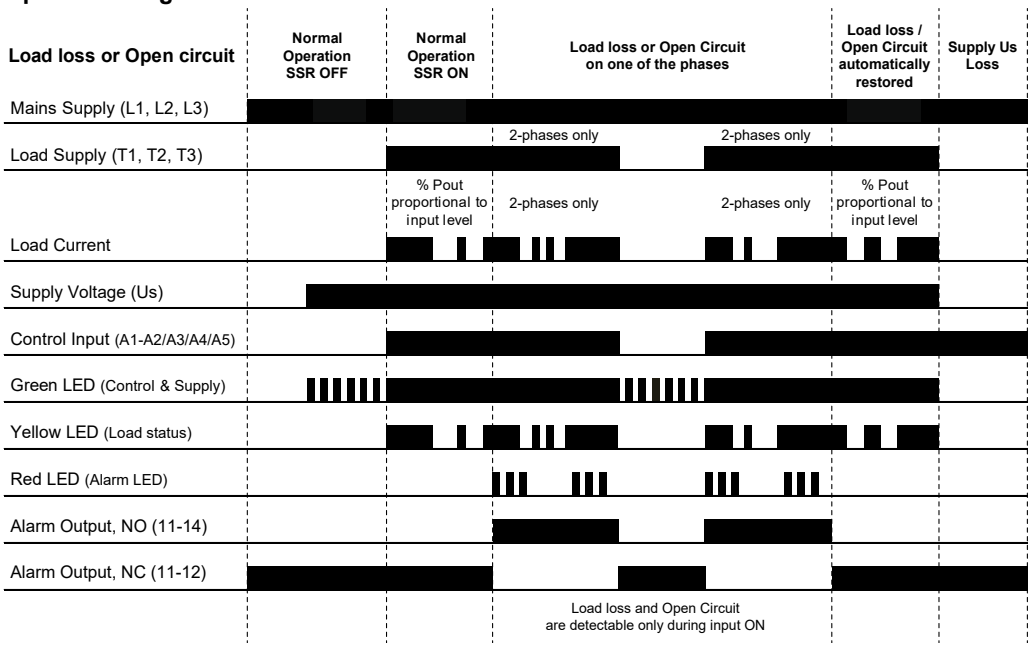

Mode of operation (continued)

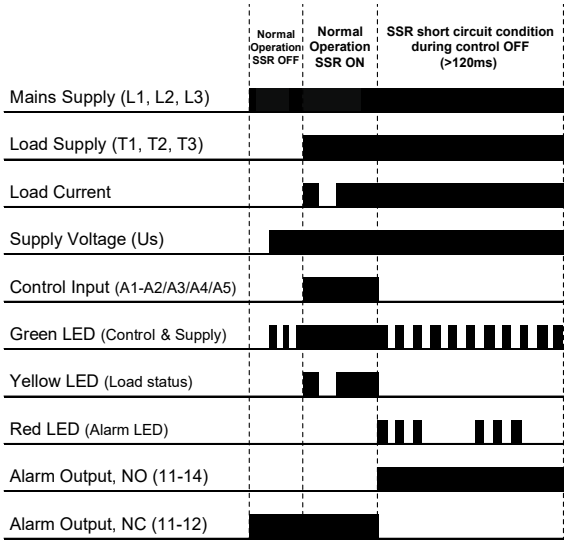

2. RGC..I..M, RGC..V..M
Suffix 'M' is available with all switching modes apart from mode 'E'. The detectable alarm conditions for the versions with suffix 'M' are the following:
- Mains Loss (Operation diagram 2)
- SSR Over Temperature (Operation diagram 3)
- SSR Internal Fault (Operation diagram 3)
- Load Loss (Operation diagram 4)
- SSR Open Circuit (Operation diagram 4)
- SSR Short Circuit (Operation diagram 5)

The operation diagrams for Mains Loss, SSR Over Temperature and SSR Internal Fault for the RGC..I..M and RGC..V..M are identical to those of RGC..I..P and RGC..V..P shown in Operation Diagrams 2 and 3. The following diagrams show the behaviour of the RGC..I..M and RGC..V..M under the additional detectable abnormal conditions available only with the 'M' suffix versions.

Operation diagram 4:

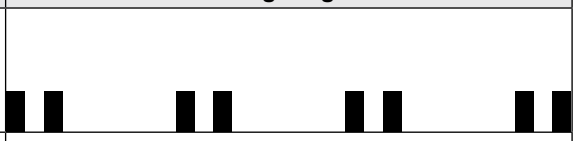

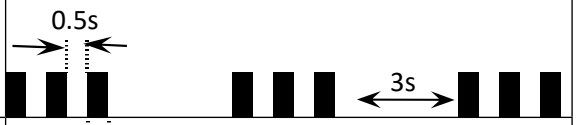

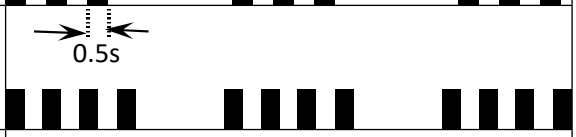

Operation diagram 5:

LED indicators

		RGC..AA..	RGC..I.., RGC..V..
CONTROL	Green	Control >4 mA: varying intensity with control level Control <4 mA: Flashing 0.5 s ON, 0.5 s OFF	Supply ON, Control ON: ON Supply ON, Control OFF: Flashing 0.5 s ON, 0.5 s OFF
LOAD	Yellow	n/a	Load ON: ON
ALARM	Red	n/a	Refer to Alarm management section
	Green	Refer to Alarm Management section (Mains loss and SSR internal fault only)	n/a

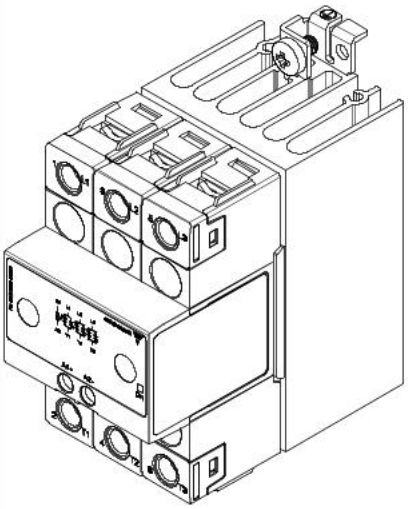

Alarm management

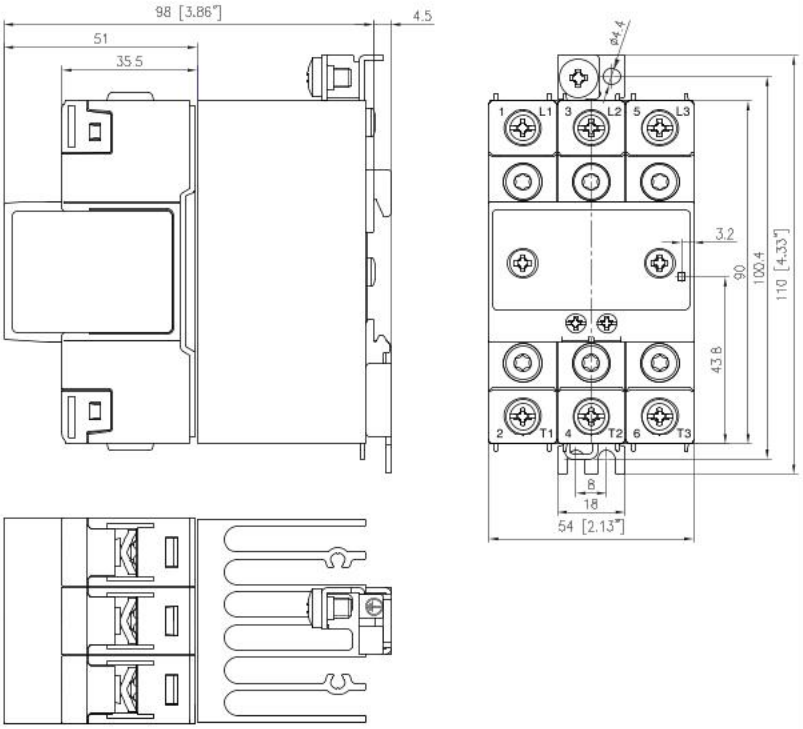

Flashes	Description of Fault	Timing Diagram
2	Mains loss	
3	Load loss, SSR open circuit or SSR short circuit	
4	SSR internal fault	
100%	SSR over temperature	

In case of an internal error, attempt to reset the Mains supply by Switching OFF and back ON to clear the error condition. If this condition is still present, return device to factory.

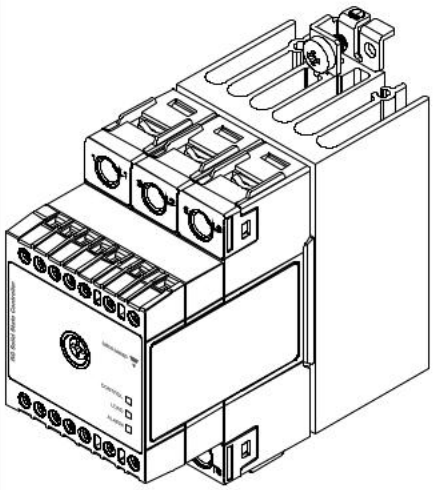

Dimensions

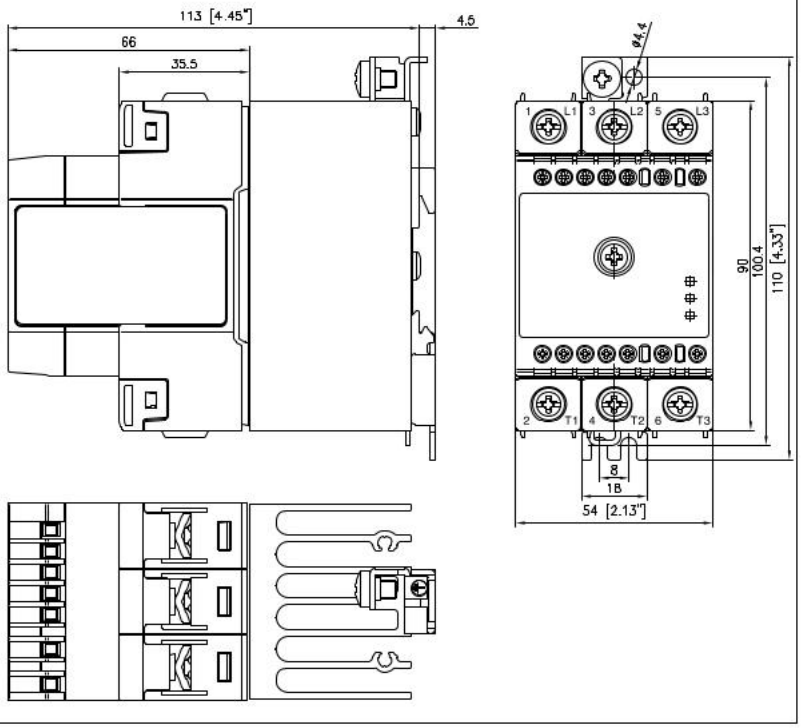

RGC2..AA25
RGC3..AA20

RGC2..I25, RGC2..V25
RGC3..I20, RGC3..V20

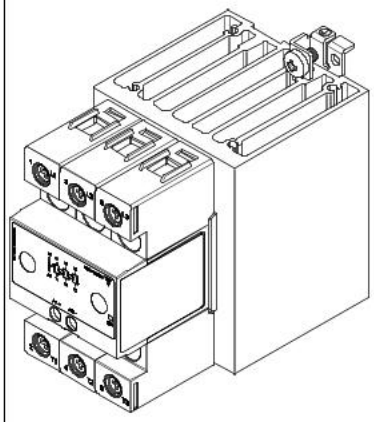

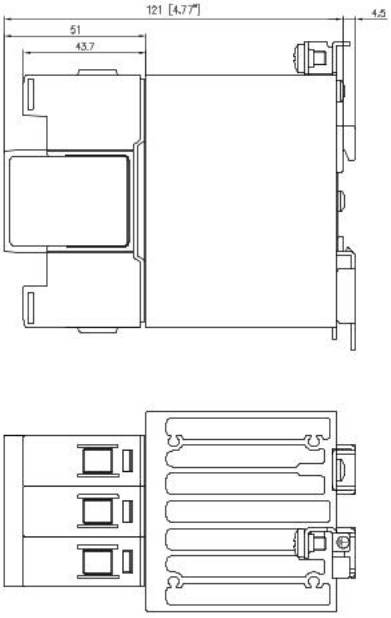

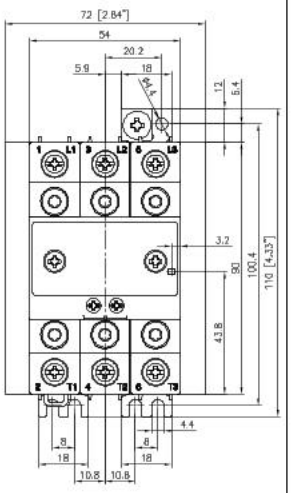

Housing width tolerance +0.5mm, -0mm as per DIN 43880. All other tolerances +/- 0.5mm.
Dimensions in mm.

Terminals labelling:

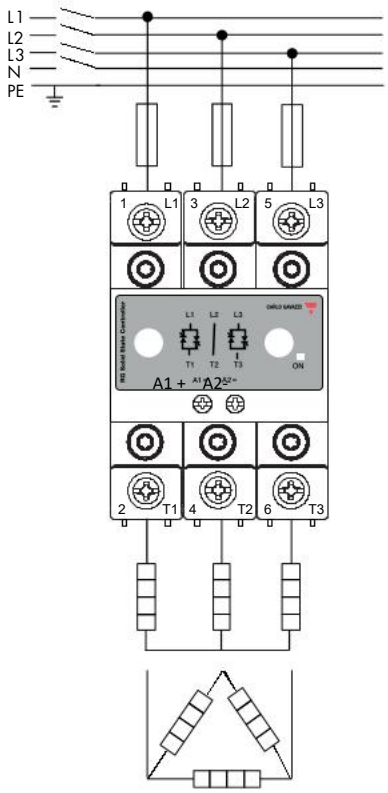

1/L1, 2/L2, 3/L3:	Line connections
2/T1, 4/T2, 6/T3:	Load connections
A1 , A2:	Control input 4-20 mA (RGC..AA..), 4-20 mA (RGC..I..), 1-5 V (RGC..V..)
A1 , A3:	Control input 12-20 mA (RGC..I..), 0-5 V (RGC..V..)
A1 , A4:	Control input 0-20 mA (RGC..I..), 0-10 V (RGC..V..)
A5:	External Potentiometer input (RGC..V..)
Us (+, ~):	External supply, positive signal (RGC..DM, DFM, DP, DFP), AC signal (RGC..AM, AFM, AP, AFP)
Us (-, ~):	External supply, ground (RGC..DM, DFM, DP, DFP), AC signal (RGC..AM, AFM, AP, AFP)
C1, C2:	Configuration mode selection External short link between C1 & C2 is required ONLY in case of 4-wire, 3-phase systems
Uf+:	Fan supply positive signal
Uf -:	Fan supply ground

Connections to Uf-, Uf+ are readily terminated by manufacturer. No other connection is required by end user.

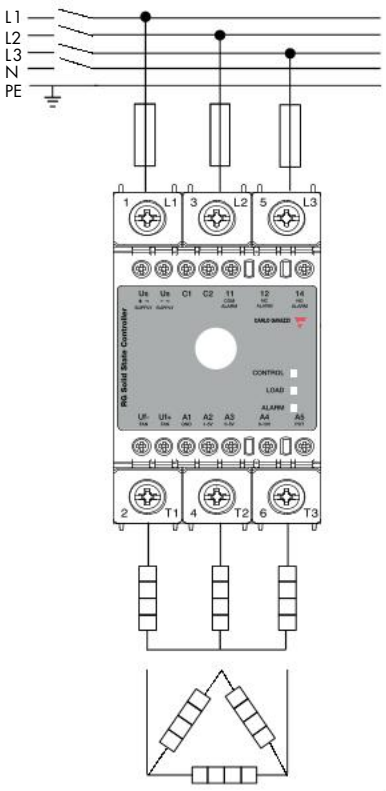

Connection diagrams

RGC2..AA

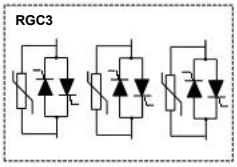

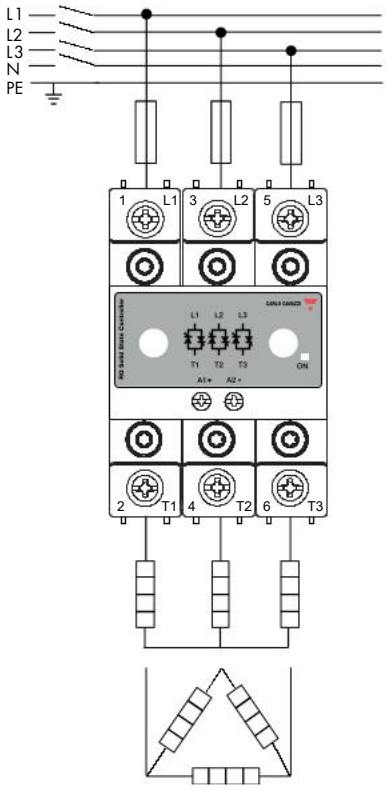

RGC2..I, RGC2..V

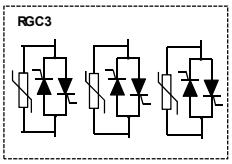

RGC3..AA

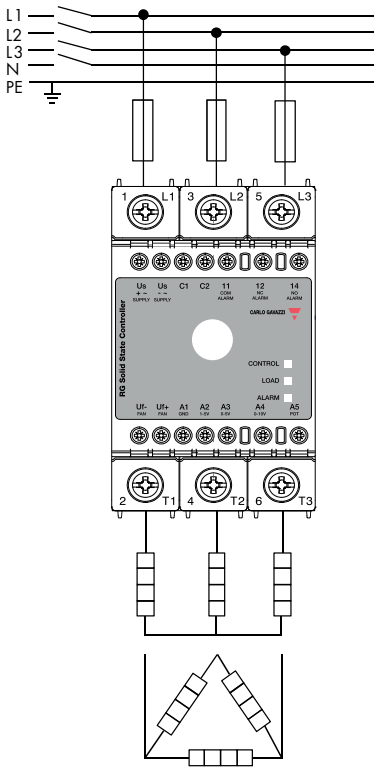

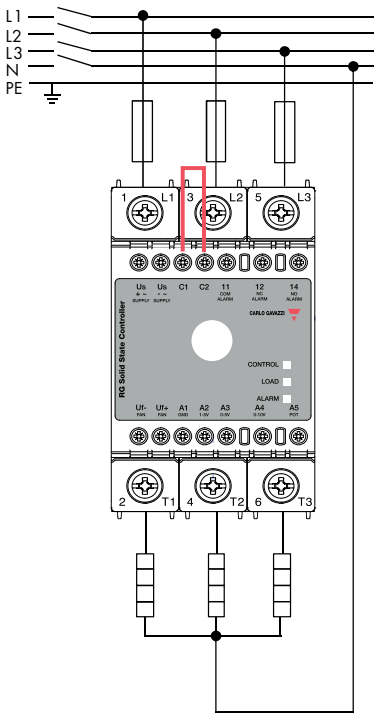

Connection diagrams (continued)

RGC3..I, RGC3..V

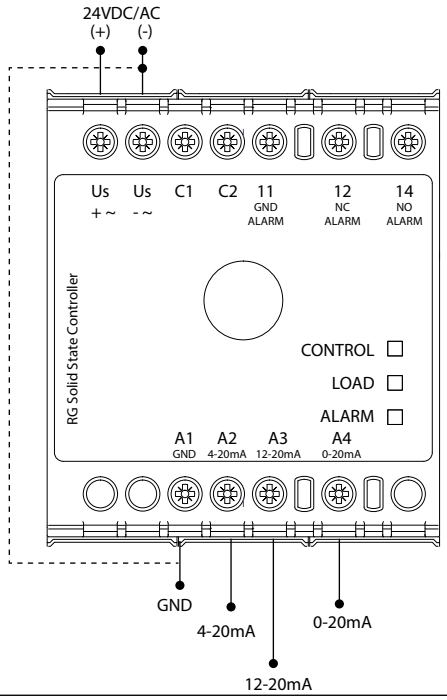

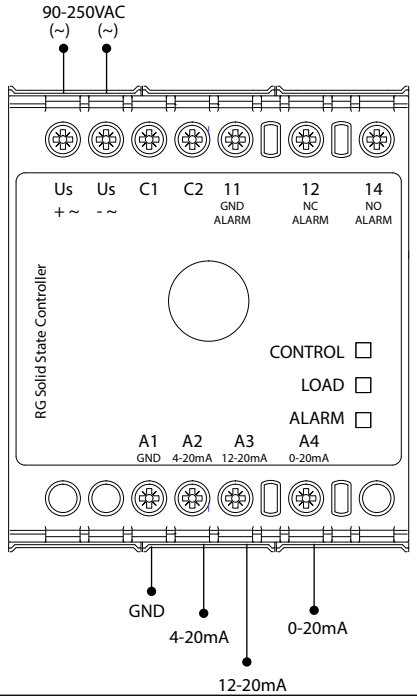

Note: Short link external connection is required between C1 and C2 terminals for 4-wire 3-phase systems.

Connection configuration

Input type 'I', external DC supply
RGC..I..DM, DFM
RGC..I..DP, DFP

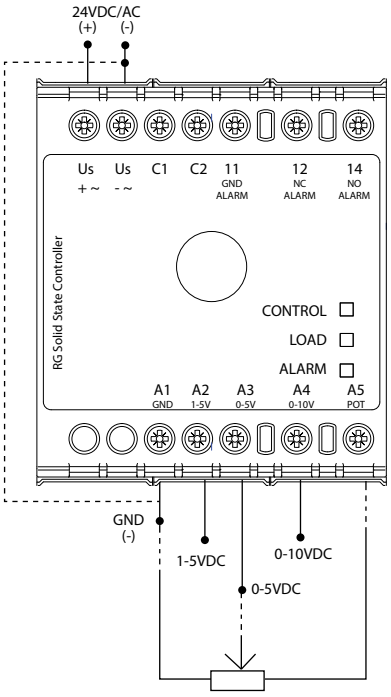

Input type 'I', external AC supply
RGC..I..AM, AFM
RGC..I..AP, AFP

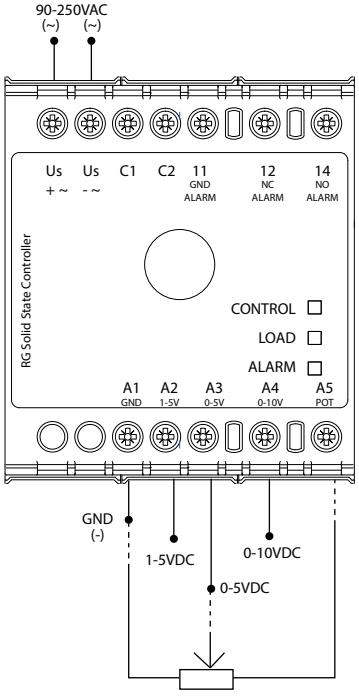

Note: Contol input shall be connected either to A1-A2 or A1-A3 or A1-A4 only

Input type 'V', external DC supply
RGC..V..DM, DFM
RGC..V..DP, DFP

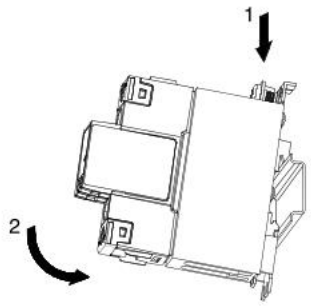

Input type 'V', external AC supply
RGC..V..AM, AFM
RGC..V..AP, AFP

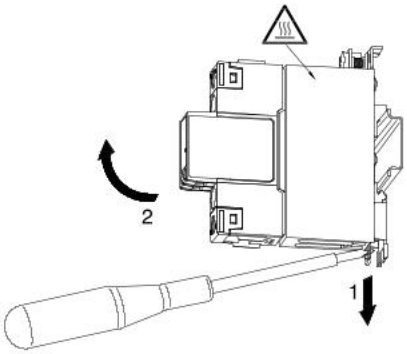

Note: Control input shall be connected either to A1-A2 or A1-A3 or A1-A4 or A1-A3-A5 in case an external potentiometer is used.

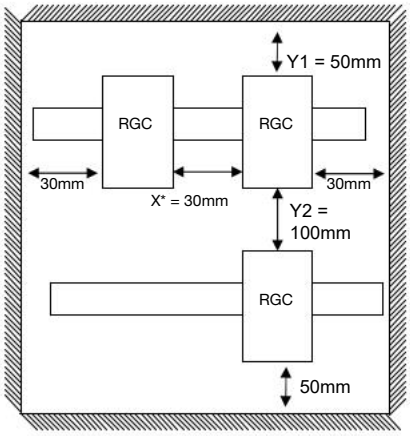

Installation

Mounting on DIN rail

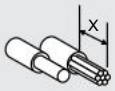

Dismounting from DIN rail

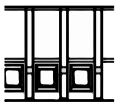

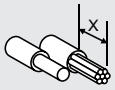

* Refer to Current Derating curves at 0mm for 0mm spacing between units

Connection specifications

Power connection			
Terminal	1/L1, 3/L2, 5/L3, 2/T1, 4/T2, 6/T3		
Conductors	Use 75°C copper (Cu) conductors		
	RGC2..25 **RGC3..20**		**RGC2..40, RGC2..75** **RGC3..30, RGC3..65**
			
Stripping length	12 mm		11 mm
Connection type	M4 screw with captivated washer		M5 screw with box clamp
Rigid (solid & stranded) **UL/cUL rated data** 	2 x 2.5 – 6.0 mm² 2 x 14 – 10 AWG	1 x 2.5 – 6.0 mm² 1 x 14 – 10 AWG	1 x 2.5 – 25.0 mm² 1 x 14 – 3 AWG
